B. Sc. II- Tour Report

2022-2023

As per syllabus Department of Zoology has arranged study tour to Malvan, Tarkarli and Vengurla on 12th and 13th February 2023. As per the instructions given by the faculty members we all gathered on Jaysingpur bus stand at 06:30 am and moved towards Malvan.

Sindhudurg

Our journey continued to reach Sindhudurg and reached there at 01:00 pm. We went there to see the fort by boating. The fort was built by Hiroji Indalkar (Deshmukh). It is the Shivaji's Master Architect built in 1664 within 3 years. It is spread over the area of 48 Acres with 2-3 mile long rampart and wall is 30 feet high and 12 feet thick. It is one of the historical place and tourist place. Due to high tide we did not observe any aquatic animals.

After this we went to fish market around the beach. This market is famous for various sea animals. Here, we observed different fishes like Pomphret, Saw fish, Scoliodon, Sting ray. Along the fishes we also observe Loligo, Sepia, Star fish, Prawn, Squilla, Jelly fish, and crab etc.

1) Pomphret -

It is marine bony fish found in small shoals. It is used for food which is delicious and tasty having high food value and high protein; It is rich in Vit -A, Ca and Fe .

2) Loligo -(Squid)

Body is long and cylindrical, fins are short and are united .It belongs to Phylum - Mollusca and Class -Cephalopoda. Head is short and bears pair of large eyes and central mouth is surrounded by 10 arms, provided with sucker one of pair is elongated and bear sucker at free terminal end is called tentacle.

2) Sepia -(Cuttle fish)

It is marine Mollusca belongs to class Cephalopoda as head bear 5 pairs of arms and shell is internal. It lives in shallow water. Its foot is modified into arms and tentacles. Sepia show presence of ink glands used in offence and defense.

3) Prawn -

It is marine Crustacean, belonging to Phylum – Arthropoda . The body is formed 19 segments. Body is divisible into cephalothorax and abdomen. It is used as food due to its high nutritive value. Prawns are cultured artificially. Food prepared from Prawn is delicious and tasty.

4) Jelly fish – (Aurelia)

It is marine in habitat belongs to Phylum- Coelenterata and Class – Scyphozoa and Order – Semaestomeae. They show polymorphism, Medusa stage is dominant. It shows radial symmetry. Ploypoid phase is represented by small polyp which gives rise to medusa.

5) Crab -

The Crab belongs to Phylum – Arthropoda, Class – Crustacea, Order – Decapoda. The habitat is marine as well as fresh water, it is omnivorous. It is also having great food value.

6) Sting ray- It belongs to class chondrichthes. Stingrays are disk-shaped and have flexible, tapering tails armed, in most species, with one or more saw-edged, venomous spines. The dasyatid stingrays, also called whip-tailed rays and stingarees, inhabit all oceans and certain South American rivers. They have slim, often very long, whiplike tails.

7) Mackerel - The Indian mackerel is a species of mackerel in the scombrid family (family Scombridae) of order Perciformes. Mackerels are rounded and torpedo-shaped, with a slender, keeled tail base, a forked tail, and a row of small finlets behind the dorsal and anal fins. They are carnivorous fishes and feed on plankton, crustaceans, mollusks, fish eggs, and small fish.

8) Ribbon fish - The ribbonfish are any lampriform fishes in the family Trachipteridae. These pelagic fish are named for their slim, ribbon-like appearance. They have an elongated and compressed body, a very long dorsal fin, a large head, low pectoral fins, a mouth in advanced military elongated teeth.

9) Stiped bonito - Their body is elongated and very robust, characterized by a grayish color with dark tonalities. Their fins have small yellowish stripes, that spread to their tails. They can also have their bodies full of scales, depending mainly on how they are raised in the areas where they develop. Their chest and abdominal area, are more prominent than the rest of their body. They are very good swimmers; which often travel large areas of water at long distances.

11) Dian fish- *Bodianus diana*, is a species of wrasse native to the Indian Ocean from the African coast to the Nicobars and the Cocos-Keeling Islands. Hogfish (*Bodianus*) get their name from the way they look for food in the substrate using their snout.

12) Surmai fish- Packed with Omega-3 fatty acids, Surmai is one of the healthiest fishes available. Taking into account its large size, it is usually prepared in form of slices or steaks. Freshness Indicators : Intact & transparent eyes, firm texture, red gills & bright colour.

After this visit we went to stay place and had a nice dinner and rested. On next day we visited to Tarkarli beach here we enjoyed with lots of fun and observe many crabs and shells. After that we started our journey towards vengurla.

Vengurla

Here we visited regional fruit research station and saw varieties of fruit plantations. We were given a tour of the orchard by Dr. Bhingarde. We also visited a lab here where they explained how the insects are bred and cultivated to use in the process of saving plants and trees. We also observed the different types of pests on varieties of fruit plants. There are number of insect pests damaging mango tree but the most abundant and destructive are mango hoppers, mealy bug, stem borer, fruit fly, mango nut weevil and play a major role in bringing down the fruit quality and yield. There are no serious pests and diseases found in kokum plantation .However leaf miner and mealy bugs cause damage to tender leaves. The fruit plantation we observed there is as follows with their medicinal properties,

1. Mango - A mango is an edible stone fruit produced by the tropical tree *Mangifera indica*. They are a great source of magnesium and potassium, both of which are connected to lower blood pressure and a regular pulse. Mangoes are a good source of fiber and antioxidants, including vitamin C, which means they support a healthy immune system.

2. Kokam - *Garcinia indica*, a plant in the mangosteen family, commonly known as kokum. The kokum fruit is a powerhouse of rich nutrients. Kokum is packed with many essential vitamins such as vitamin A, vitamin B3, vitamin C and minerals such as calcium, iron, manganese, potassium, and zinc. It also contains a good amount of folic acid, ascorbic acid, acetic acid, hydroxy citric acid, and fibre. Kokam fruit is a natural coagulant and a glass of kokam juice gives us immense relief from the scorching heat in summers.

3. Betel Nut - Chewing betel nuts ensures healthy digestive system, eradicates indigestion, and helps restore appetite. Improved digestion eradicates constipation, and thus improves the overall health. is pungent, bitter, spicy, sweet, salty, and astringent. It was said to expel wind, kill worms, remove phlegm, subdue bad odors, and beautify the mouth.

4. Nutmeg/Jaiphala - Jaiphala is valued as a potent aphrodisiac, digestive stimulant, and essential oil easing the pain associated with headaches and treats common cold, cough and asthma.

5. Water Apple- Water apple is rich in Vitamin C and other phenolic compounds called flavonoids. These prevent the damage of cells due to free radicals, pollutants and toxic elements

6. Amla- Amla has antibacterial and anti-inflammatory properties. The phytonutrients and antioxidants in amla can benefit memory by fighting against free radicals that can attack and damage brain cells.

7. Black pepper - Black pepper is a good source of manganese, a mineral that can help with bone health, wound healing, and metabolism.

8. Cashew - Cashews are a wonderful source of healthy fats, including monounsaturated and polyunsaturated varieties. Cashews are low in sugar and rich in fiber, heart-healthy fats, and plant protein. They're also a good source of copper, magnesium

Finally we started our back journey from Vengurla to Jaysingpur. We reached Jaysingpur at 10:30 pm. It was a knowledgeable and fantastic experience.

Department of Zoology has organized study tour of B. Sc. III students to Bangalore (07.02.2023), Ranganatittu (08.02.2023), Ooty (09.02.2023), Mysore (10.02.2023), Shravanbelagola (11.02.2023) and back. During this study tour students have got an opportunity to explore various institutes and natural habitats so as to increase the knowledge in the field of Zoology. In Bangalore, a visit was arranged at the Department of Entomology and Department of Apiculture, University of Agriculture, GKVK campus. Here students have interacted with Prof. Smitha to know the details about the insect diversity and apiculture. Students have also visited Visvevsaraya Industrial and Technological Museum where students have dealt with the basic concepts in the field of Biotechnology with demonstrations.

Next day, visit was arranged to Ranganatittu Bird Sanctuary, where students were exposed to natural habitat of Wetland. Here various species of birds and their behaviours were observed by students. In the interpretation room, students were heard various bird calling.

During the journey, while passing through Bandipur Tiger Reserve, Spotted deer, Peafowl and Wild boar were predominantly noted.

The next destination was Ooty where students were visited Botanical garden. In this garden various indigenous and exotic plant species were studied. Further, in Ooty, visit was arranged at Tea plantation where students were enjoyed with the beautiful landscape.

In Mysore, visit was arranged to Shri Chamarajendra Zoo. In this Zoo students have encountered with different wild animals maintained. Students have gained lot of information as well as knowledge over here. This Zoo has maintained more than 500 species of wild animals which are Indian as well as originated from other parts of world. After this informational visit, we went to Mysore Palace and Brindavan gardens for sightseeing. Finally we went to Shravanbelagola to Visit single stone 56 feet Bahubali Idol, which is known to be the Pilgrimage of Jainism. We were back to Jaysingpur.

Tour Report –B.Sc I
2022-23

Visit area:

As per syllabus our Zoology department arranged short study tour of B. Sc I to visit butterfly garden. As per the plan tour was arranged on 16 march 2023. The study tour was headed by Dr. S. R. Patil sir. Jaysingpur College Jaysingpur has developed Butterfly garden in 700 M² areas. In this garden specific host plants and nectar plants have been planted.

Introduction:

Butterflies are colorful, flying beauty on the earth. Due to their beautiful color patterns they have got aesthetic value. These are also considered as good environmental indicators as they relied on specific floral diversity. Butterflies play an important role in the ecosystem. These are represented as primary consumers in the ecological pyramids as both adults and caterpillar stages are eaten by secondary consumers like Lizards, birds, Frogs, toads, snakes etc. Even some parasites attack on the pupa of butterflies. Beside all these natural obstacles butterflies can successfully complete their lifecycle. Higher reproduction increases the rate of survival might be the key success of these tiny creatures. This strategy will help them to combat mortality rate.

As we all know that lifecycle of butterfly is completed mainly in four stages.

1. Eggs
2. Caterpillar
3. Pupa and
4. Adult

Eggs: Eggs are tiny; vary in color, round/cylindrical/oval in shape. These eggs are laid on the surface of leaves or stem along with sticky material so the eggs can firmly attach to the substratum. These eggs have very less amount of nutrients in it. Hence they get hatched to give rise to caterpillars.

Caterpillar/ Larva: Caterpillar hatched out from the small tiny eggs usually lasts up to one month. The time period of this stage varies species to species. These larvae will feed upon

leaves of plants. Individual species feed upon very specific plant and such plants are called host plants. Some of the caterpillars also feed on flowers of plants.

Pupa: It is the life stage of butterfly when it encloses itself in case called Chrysalis during metamorphosis. This stage lasts from few days to many months. Sometimes emergence of adult from the may get delayed as it is environmental drive.

Adult: This is the final stage of butterfly lifecycle. Adult butterflies are colorful and have aesthetic value. These mainly feed upon nectar of flowers. The life span of adults is very short and lasts up to one or two weeks. Once males mate with female immediately they die and female also die after laying eggs.

Hence, on the basis of its lifecycle butterflies require two types of plants, namely, Host plants and Nectar plants. As host plants are specific, detailed study is needed during the introduction host plants as per the status of butterfly diversity in particular area. However, butterfly do not relay on specific nectar plants so nectar plants are selected randomly.

Write a critical appreciation of the story 'Laloo'.

LALOO

- Sarat Chandra Chatterji

The story 'Laloo' is written by Sarat Chandra Chatterji. It is about a naughty boy called Laloo. The narrator had a friend called Laloo. He was his classmate in a small Bengali school. He tells many incidents related with Laloo. Laloo was a resourceful boy who liked to frighten people out of their wits. One day he frightened his mother by throwing a rubber snake in her way. One day she sprained her uncle badly & limped for over a week. Laloo's mother wanted to appoint a tutor to bind him in his studies.

Laloo's father did not do so. Laloo's father was a lawyer. So Laloo's mother decided to call her preceptor & offer her respects to him. The preceptor was an old man. He came to her house as her house was on the way to Banaras. She devoted herself entirely making all sorts of arrangement.

She prepared the sweets & fruits for him. In the evening he had a full meal & felt asleep. But late at night he was suddenly awakened. The roof seemed to be leaking & the water-drops dropped on his body. The preceptor jumped out of bed & dried himself. Now he shifted

his bed to another place. Again the same experience. The drops were coming down from the mosquito-net. The whole night he was shifting his bed from one place to another. But there was no relief. Then he went out onto the veranda. There was a lantern burning in a corner. In the veranda there were big ghats serenading (singing) him in both ears. He could not sleep there as there were a lot of mosquitos. He began running from one end of the veranda to the another. He sat at last in one corner letting the mosquitos bite. Then he had some sleep at the time of dawn.

Laloo's mother Nandarani came to the bedroom. She found that there was not her preceptor. Then she noticed that he was sleeping in one corner of the veranda. She woke him up & felt very sorry for his condition. Now she understood that Laloo had put a lump of ice in a rag on the top of the mosquito curtain. She became very angry & ordered the servants to bring Laloo near her. But Laloo had gone to his Auntie's house & lived there for a fortnight.

Laloo was the same person after growing. Everyone loved him as he was ready to help everyone in all situation. One he was called to sacrifice goats in the annual worship of the goddess Kali, at the house of Manohar Chatterji. The usual man-the blacksmith was seriously ill & could not go to the house of Chatterji. People run to Laloo

at night & took him for the sacrifice. Laloo slaughtered necks of the goats. He demanded more goats he gave savage cry & the people were scared. He said, "The blood has gone to my head -- give me more goats, or I shall offer human sacrifice." everyone ran towards the main gate. Thus he scared the people & threatened Chatterji not to sacrifice any goat hence further. Thus Laloo was a boy who thought so many lessons to so many people.

que. Describe backcross method of Hybridization and add note on its achievements.

Ans. Backcross Method →

In backcross method of breeding, the hybrid and the progenies in subsequent generations are repeatedly backcrossed to one of the parents. As a result, the genotype of the backcross progeny becomes increasingly similar to that of the recurrent parent. The objective of backcross method is to improve one or two specific defects of a high yielding variety.

pre-requisite for back cross breeding →

- ① A suitable recurrent parent must be available which lacks in one or two characteristics.
- ② A suitable donor parent must be available.
- ③ The character to be transferred must have high heritability and preferably it should be determined by one or two genes.
- ④ A sufficient number of back crosses should be made so that the genotype of recurrent parent is recovered in full.

The entire sequence of events happening from the end one nuclear division to the beginning of next is called cell cycle

Cell Cycle consists of main stages →

① Interphase

② Division phase.

① Interphase →

- Interphase is the phase between two successive cell division [end of one cell division to the beginning of next cell division]
- It is the longest phase in the cell cycle
- It is the ~~long~~ dormant but it's metabolically active stage
- It is divided into 3 sub-stages.

Q.1 Explain soft and hard integumentary derivatives:

I) Epidermal glands

2) Femoral glands:-

- Femoral glands are found in male lizard
- They are found below the thigh in row from the knee to the cloaca.
- They secrete a sticky substance which hardens into short spine.
- The spines are used for holding the female during copulation.

Femoral gland

Uropygial glands

- These glands are found only in birds
- They are best developed in aquatic birds
- Uropygial gland are of alveolar type
- They are located on the dorsal side of tail of uropygium
- They secrete oil, which is odouriferous during sexual activity.

Q Define Fertilization explain types & process

Definition:-

The fusion of a haploid male gamete (spermatozoa) and a haploid female gamete (ovum) to form a diploid cell, the zygote is called fertilization.

Types of Fertilization

In majority of aquatic animals the sperms and eggs released into the water & their fusion takes place outside the body of male and female parents i.e. in the water it is called as external fertilization. It is of primitive type. Internal fertilization. In some aquatic animals and majority of terrestrial animals like amniotes (reptiles, birds and mammals) the sperms are introduced into the female genital tract where fusion of sperm and egg takes place. It is called as internal fertilization. It is advanced type.

Monospermy:- During fertilization generally single sperm enters into the egg and fuses with it. It is called as monospermy.

Polyspermy:- In some animals many sperms enter into the egg called as polyspermy. Even many sperms enter into the egg only sperm nucleus fuses with egg nucleus and other sperm nuclei are degenerated. Such polyspermy occurs in animals in which egg having high amount of yolk granules.

Q1 write in detail about scatterd diagram.

This is the simplest method of studying correlation the value of two variable are plotted on a graph on variable taken along x-axis and other along y-axis.

By plotting a data on graph paper we get the point. which are generally scatterd hence it is called scatterd diagram the manner or the pattern in which the points are scatterd it suggest the degree and direction of correlation degree correlation is denoted by is ' r ' and direction of correlation. degree correlation is denoted by ' r ' and direction of correlation is denoted by +ve/-ve

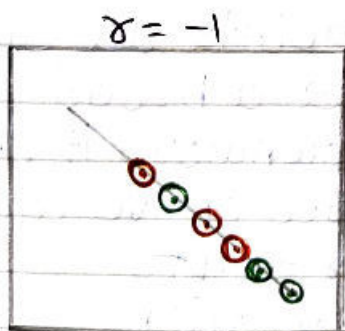

1)

IF all the points lie on a rising straight line correlation perfect/correlation i.e $r = +1$

2)

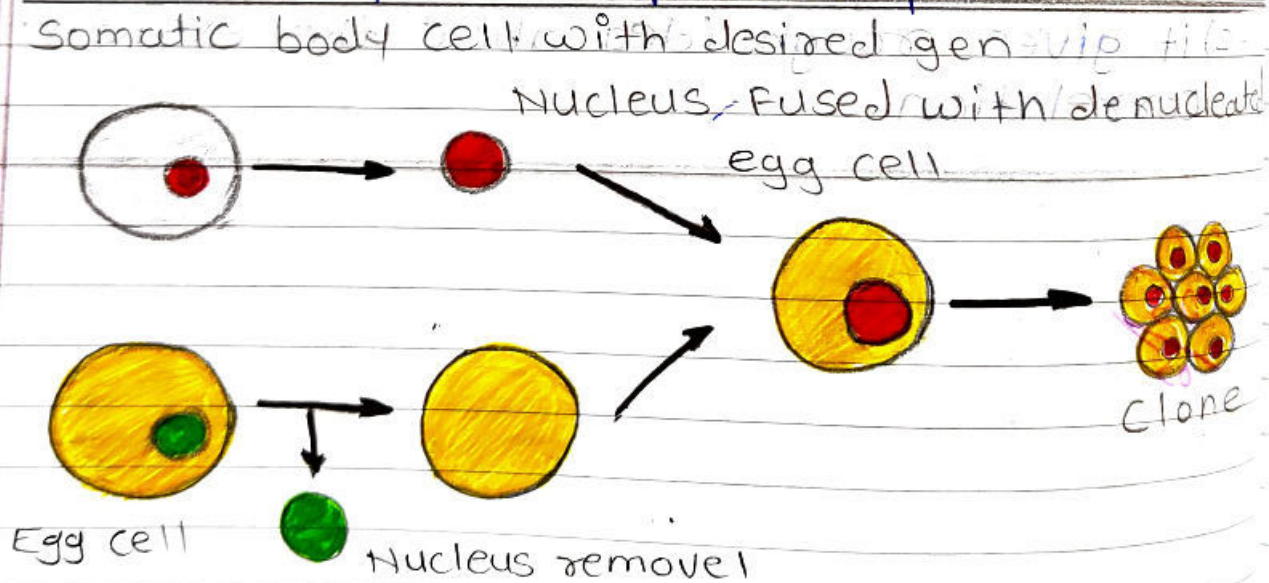

IF all points lie on a falling line the correlation is perfect -ve correlation

i.e $r = -1$

Perfect -ve correlation

2) Write in detail about nuclear transplantation

- Gene transfer by nuclear transfections:
Somatic cell nuclear transfer [SCNT] is a technique for cloning. The nucleus is removed from a healthy egg. The egg becomes the host for a nucleus that is transplanted from another cell, such as a skin cell. The resulting embryo can be used to generate embryonic stem cells with a genetic match to the nucleus donor or can be implanted into a surrogate mother to create a cloned individual, such as Dolly the sheep. Cloning by nuclear transfer from adult somatic cells is a remarkable demonstration of developmental plasticity.

Q. Explain fresh water prawn culture:-

→ Introduction →

Composite Fish Farming activities using different native as well as exotic fin fishes have now become a common practice in many parts of the country.

Culture of freshwater prawns along with major carps has been an important step towards achieving this goal.

→ Morphology →

- Body shape and appearance :-

The bilaterally symmetrical body is elongated, more or less spindle shaped with the size varying from species to species.

- Body division :-

The body of a fully developed prawn is made of 19 appendage-bearing segments divisible into two different regions an anterior cephalothorax and a posterior abdomen.

Cephalothorax :-

The un-jointed large rigid, cylindrical cephalothorax is formed by the fusion of the head (comprising five appendage-bearing segments), and the thorax (comprising eight segments).

Q. Explain Artificial model of bee hive & Newton's and langhr's models.

• Introduction:

Artificial intelligence is a method of making a computer, a computer-controlled robot, or a software think intelligently like the human mind.

• Modern Methods:-

The Langstroth hive is the most common style in use today and a favorite for new beekeepers. The design was patented by Rev. Lorenzo Langstroth in the mid 19th century and features removable frames that the bees build comb in. Langstroth hives consist of boxes that stack on top each other.

• parts of a Langstroth Hive :-

1) outer/ Telescoping cover:-

keeps the whole hive dry from rain. similar to a roof on a house.

2) Inner cover:-

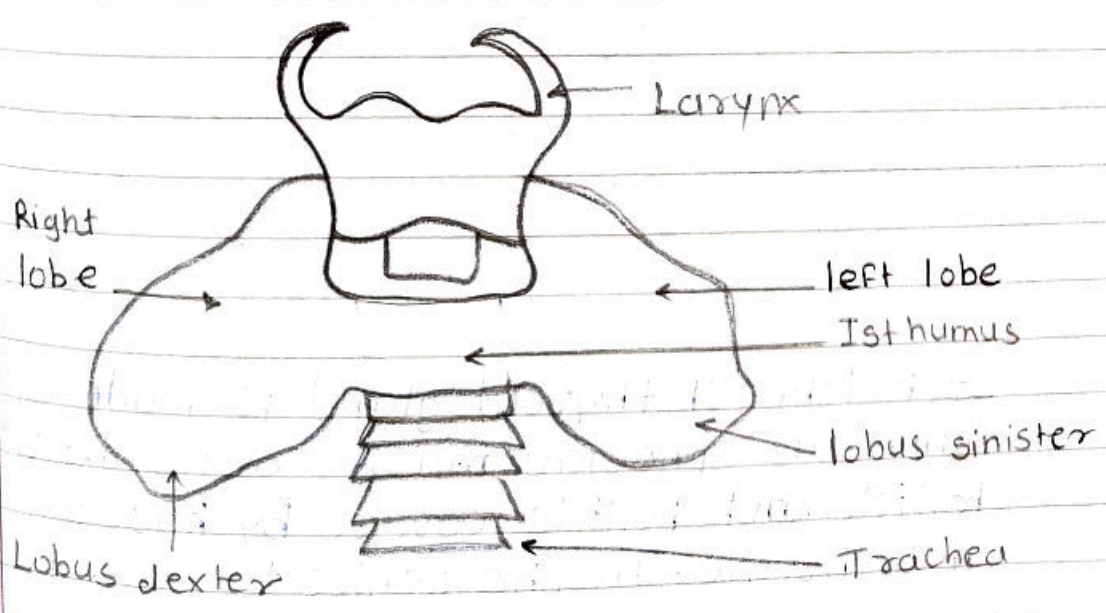

The inner cover fits betⁿ the top hive box and the outer cover it provides insulation and prevents frames from sticking to the outer cover. It can used with a bee escape when harvesting honey.

Q1 Define endocrine gland and explain detail regulation thyroid hormones.

The endocrine glands secrete the special chemical messengers called hormones. They are carried by the blood stream to influence the functioning of specific "target" organs or tissues of the body as a whole. The regulatory role may be either excitation or inhibition.

Thyroid gland :-

In vertebrate anatomy "Thyroid gland" is one of the largest endocrine gland. Thyroid gland was discovered by "Thomas Swann". The thyroid gland controls how quickly body uses energy, makes proteins & control how sensitive the body is to other hormones.

Q1 What is vector, host and parasite write note on life cycle of plasmodium vivax.

diffusion :-

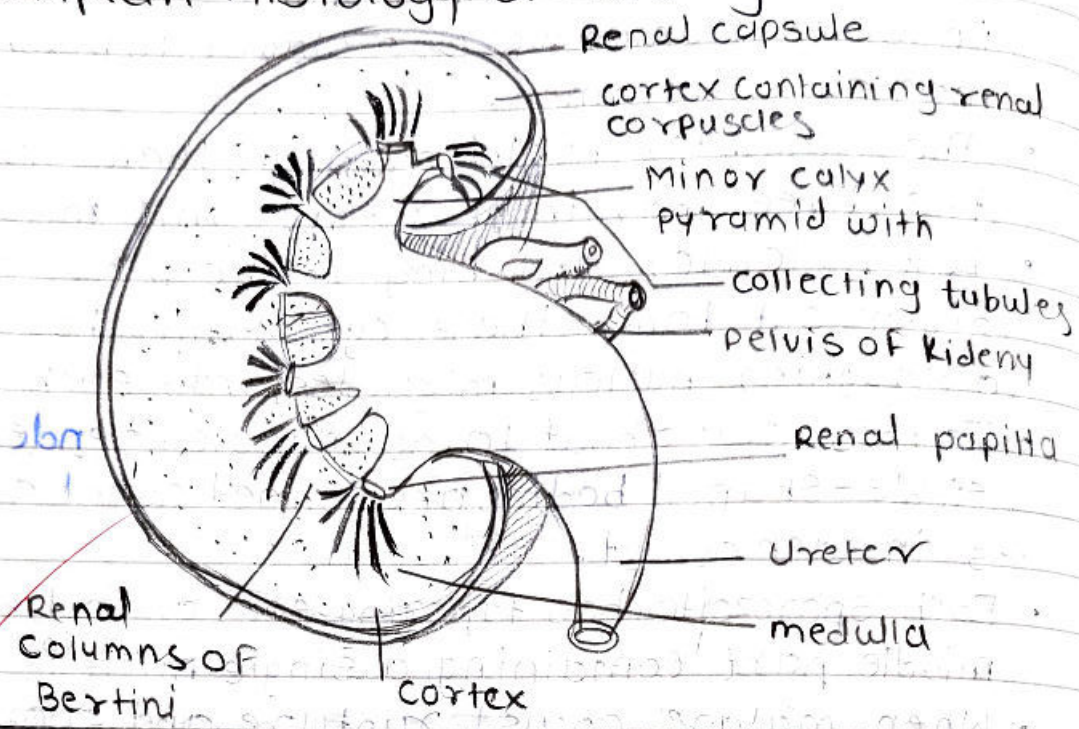

plasmodium vivax completes its life cycle in two hosts. The sexual phase of the life cycle occurs in insect and asexual reproduction occurs in humans.

Life cycle of plasmodium vivax

- The life cycle of P. vivax is digenetic involving 2 hosts.
- Its life cycle is completed by both asexual & sexual phases.
- Asexual cycle is completed in man by schizogony

Q

Explain Histology of kidney :-

The gross structure of kidney in v.s shows that it is a bean shaped organ with a notch called hilus or hilum through which renal vessels, nerves and the ureter enter or leave the kidney.

Renal capsule is the outer covering of kidney consisting of collagen fibres along with few elastic and smooth muscle fibres. The hilus is also lined by an invagination of the capsule.

The v.s shows outer granular cortex and inner striated medulla. The medulla has 5-18 triangular renal pyramids. The tip of each renal pyramid is the renal papilla. Its striations are the collecting ducts and associated blood vessels. Each pyramid has a base directed towards the cortex and an apex

What is Assisted Reproductive Technology?

Describe sperm collection and sperm bank.

⇒ ART includes fertility treatments that handle both sperms as well as eggs. Some of its applications are as follows.

A) Sex selection: This is a technique by which a young one desired sex can be obtained.

i) Importance: a) Management of captive endangered species:

It is a valuable tool in the management of endangered species in captive breeding programmes. For example, if a number of members of a particular species is to be increased, then more female members are required. These females can be artificially inseminated and a considerable number of that species can be obtained.

If the males of a particular species are required, then this can be achieved.

b) To increase milk production: In a dairy, female cattle are preferred as they produce milk. Therefore the number of female calves can be increased by this technique.

ii) Principle: In most of the mammals, there is a chromosomal sex determination.

Male has XY chromosomes and it is heterogametic. Female has XX chromosomes and it is homogametic. The sex determining factor is the sperm. So in this technique, sorting of X chromosome bearing sperms and Y chromosome bearing sperms from the semen is carried out.

Q 1) Explain replication of DNA?

1) The process of synthesis of exactly similar copy of DNA is called replication of DNA.

2) It is a semi-conservative type.

3) It is present in the nucleus.

4) This is enzyme involved in DNA

06 helicase, DNA polymerase, DNA polymerase, DNA ligase and Topoisomerase.

5) Special protein molecule is called as single strand DNA Binding protein (SSDBP) are also involved.

The following steps are involved -

1) Unwinding DNA

2) primary synthesis

3) Replication fork

4) Okazaki fragment

5) Removal of primer.

1) Unwinding DNA

The the process DNA is Unwind and two strand must be separate from each other. This enzyme is brought about by the enzyme DNA helicase.

This enzyme is separated ~~be~~ and antiparallel + unwind. This enzyme break weak hydrogen bond between complementary base pair of 2 strand. Two strand 3' free end & 5' free end.
