Organic Chemistry
Introduction and Basics

Mr. R. D. Tasgaonkar
Jaysingpur College Jaysingpur
October 13, 2022

Mr. R. D. Tasgaonkar (Jaysingpur College) Organic Chemistry October 13, 2022 1 / 11

Key Concepts

- **Carbon as the Foundation:** Organic compounds primarily consist of carbon atoms bonded to hydrogen, oxygen, nitrogen, and other elements.
- **Hydrocarbons and Functional Groups:** Examples of hydrocarbons include alkanes, alkenes, and alkynes. Functional groups such as hydroxyl (-OH) and carbonyl ($\text{C}=\text{O}$) impart specific properties.

Activity Report

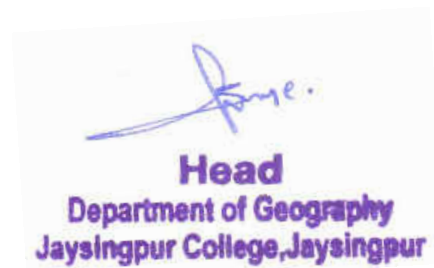

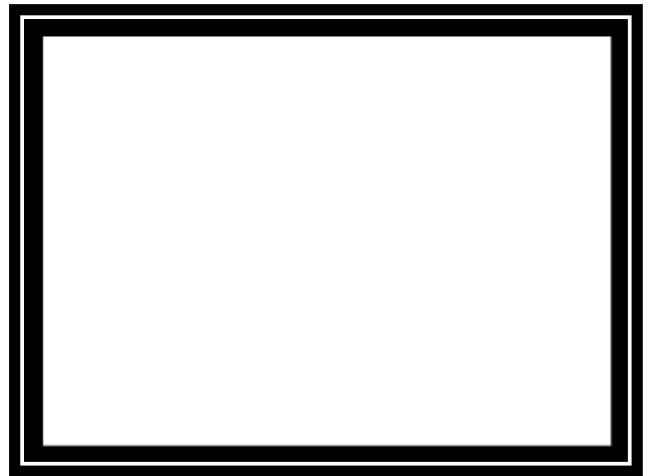

Organised By: Department of Geography

Year:	2022-23
Name of the Activity:	Digital based education (ICT)
Date:	
Venue:	Geography department
Co-ordinator:	Prof. T.G.Ghatage
Organised for: College/class/ staff	class
No. of Participants	40
Nature: (e.g. Academic, cultural, sports etc)	Academic
Objectives of the Activity	Academic
Chief Guest/s or Resource Person/s	Prof. T.G.Ghatage Dr. R.L.Koli
Short Report (in English)	

Digital based education (ICT)

The department of geography in the academic year 2022-23, the work of imparting knowledge to the students through the use of various educational technologies has been done in a very good manner through the department in order to create a special interest in teaching. This method has been implemented in our department, for that all the

professors of the department have tried to present to the children by studying the various components of computers(like PPT, Video lecturer, project etc). Overall teaching work has been done very well in Geography Department.

PLANT METABOLISM**

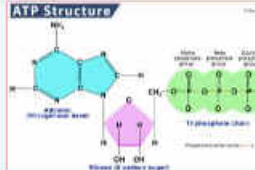

**Unit 2.a
RESPIRATION**

Dr. Suraj D. Umdale
 Assistant Professor
 Department of Botany,
 Jaysingpur College, Jaysingpur
 Kolhapur (MS), India.
 E-mail ID: surajdumdale@gmail.com

- The energy trapped during oxidation, is conserved in the form of ATP molecules.
- From ATP molecules, energy is supplied during various metabolic reactions.
- Therefore, **ATP molecules are considered as energy currency** and they can readily supply energy to any metabolic reaction.
- The Aim of respiration is to **produce energy currency molecules**

Adenosine Triphosphate (ATP)

ATP Structure

ADP + Pi → ATP + H₂O

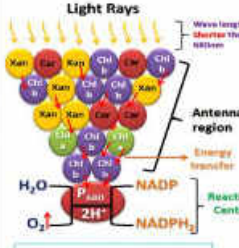

**B. Sc. II

 E-mail ID: surajdumdale@gmail.com

Photosystem II (PS-II)

- The Photosystem II (PS-II) complex consists of about **200 chlorophylls** and **50 carotenoids**, in the antenna
- The Reaction centre consists of **Zn** with Maximum absorption spectra (λ_{max}) at **680nm** known as **P₆₈₀**.
- In addition to these pigments the system shows presence of primary electron acceptor **Ubiquinone (Q)**, a **plastoquinone (PQ)**, **Mn** molecules bound to proteins, **Cytochrome b₅₅₉** and **Cytochrome b₆ (cyt b₆)** and molecules of chlorides.
- The PS II is associated with a special complex responsible for evolution of oxygen during light reaction.
- This complex is known as **OEC complex (Oxygen Evolving Complex)**.

1

BIOINFORMATICS

- > The combination of biology and information technology
- > It is a recently developed science using information to understand biological phenomenon.
- > It involves the computational tools and methods used to manage, analyse and manipulate volumes and volumes of biological data.

2

BIOINFORMATICS

- > It may also be regarded as a part of the computational biology
- > Letter is concerned with the application of quantitative analytical techniques in modeling and solving problems in the biological systems.
- > It is an interdisciplinary approach requiring advanced knowledge of computer mathematics and statistical methods for understanding of biological phenomena at the molecular level.

3

History of Bioinformatics

- > It was first introduced in 1980s.
- > It dealt with the management and analysis of the data pertaining to DNA, RNA and protein sequences.
- > It includes many other types of biological data
- > Most important ones are listed below
 - Gene expression profiles
 - Protein structure
 - Protein interaction
 - Microarrays (DNA chips)
 - Functional analysis of biomolecules
 - Drug designing

4

Broad coverage of bioinformatics

- > **Functional genomics:** Identification of genes and their respective functions
- > **Structural genomics:** predictions related to functions of protein
- > **Comparative genomics:** understanding the genomes of different species of organisms
- > **RNA microarrays:** designed to measure the levels of gene expression in different tissues, various stages of development and in different diseases
- > **Medical informatics:** involves the management of biomedical data with special references to biomolecules, in vitro assays and clinical trials

5

Components of bioinformatics

1. Creation of databases:

- > Involves the organizing, storage and management of the biological data sets
- > Databases are accessible and submit new entries.
- > Protein sequences data bank for molecular structures

6

Kolhapur (MS), India.
E-mail: sd.umdele@jaysingpur.ac.in
Mob. No: 986023229

1

What is biotechnology?

- > Biology + technology
- > Involves the exploitation of biological systems or their components for generate useful products/ services
- > Biotechnology can be defined as "the use of living microorganisms to synthesize or processes for the manufacture of useful products. It may be algae, yeast, fungi, bacteria, virus or cells of higher plants and animals or their subsystems or isolated components from living matter

Interdisciplinary Activity:

- Microbiology
- Genetics
- Immunology
- Engineering
- Chemistry & Biochemistry
- Molecular Biology
- Physiology

2

Definitions

- > **Biotechnology** means any technological application that uses biological systems, living organisms or derivatives thereof to make or modify products or processes for specific uses.
- > **Biotechnology** is "the controlled use of biological agents such as micro-organisms or cellular components for beneficial use".
- > **Biotechnology** is "The integrated use of biochemistry, microbiology and engineering sciences in order to achieve technological application of the capabilities of microorganisms, cultured tissues, cells and parts thereof"

3

Biotechnology Old/ New

- > Though the term biotech is of recent origin but the discipline is very old
- > Man started exploiting/ employing organisms as early as 5000 BC for making wine, vinegar and curd etc.
- > Such processes which are based on capabilities of micro-organisms etc. are traditionally considered as old biotechnology

4

Biotechnology Methods for Preservation of Food

5

1st world war prompted the use of microorganisms for the production of different products on commercial scale ——— **Old Biotechnology**

- > German was forced to develop technology for the production of alcohol (used for production of explosives) due to restriction of vegetable oil by Britain
- > British produced some ethanol fermentation using *Clostridium* including brew due to German interference with normal supply of these
- > Production of silk and using *Spirillum* after the destruction of silkworms in world war I.
- > Production of penicillin (*Penicillium notatum*)

6

B.Sc.-III (Semester V)
Paper- IX (DSE-F25)
Genetics and Plant Breeding

Unit IV: Plant Breeding

Dr. Suraj D. Umdele
Assistant Professor
Department of Botany,
Jaysingpur College, Jaysingpur,
Kolhapur (MS), India.
E-mail: sd.umdele@jaysingpur.ac.in
Mob. No: 986023229

1

Unit No. 4: Plant Breeding 12

4.1. Introduction, Definition

4.2. Aims and objectives of plant breeding

4.3. Methods of plant breeding

a) Introduction and acclimatization

b) Selection: i) Mass selection ii) Pure line selection

iii) Clonal selection

d) Hybridization techniques in self and cross-pollinated crops

f) Male sterility and its significance

e) Mutation breeding: Gamma garden

2

Introduction

The art and science which deals with genetic improvement of crop plants in relation to their economic uses

- Plant breeding is the science that derives new crop varieties to farmers.
- Based on the principles of genetics, as laid down classically by **G. J. Mendel** during 1860, which were "rediscovered" in 1900 by **Hugo de Vries**, **Carl Correns** and **Dick von Tschermak**; this science has taken the world forward through family addressing hunger, famine and catastrophe.
- Plant breeding began when agriculture commenced centuries back, but the real science of plant breeding took shape when Mendel's principles of genetics came to light during 1865.
- The year 2020 commemorated 155 years of Mendelian principles. No nation thrives without agriculture, and plant breeding is the integral part of that science.

3

- The agriculture began some 24,000 years ago.
- In the 19th century, plant breeding also commenced by then, and farmers must have rarely named best outcomes.
- Centuries of breeding programmes finally culminated in Sonas 64 (wheat) and IR 8 (rice) in the 1960s.
- While **Dr Norman E. Borlaug** of CIMMYT exploited Maize to genes to derive remainder wheat, in rice, the cross between *Pusa Indica* and *Dae-goo-woo-gen* (IDCWG), China produced IR 8, Peter Jennings, Henry Borshid and Sanjit Kumar De Datta of IRRI spearheaded this.
- **Dr. M. S. Swaminathan** who known as "**Father of Green Revolution in India**" for his role in introducing and further developing high-yielding varieties of wheat in India.
- This saga continues worldwide in producing thousands of varieties in all edible crops.

4

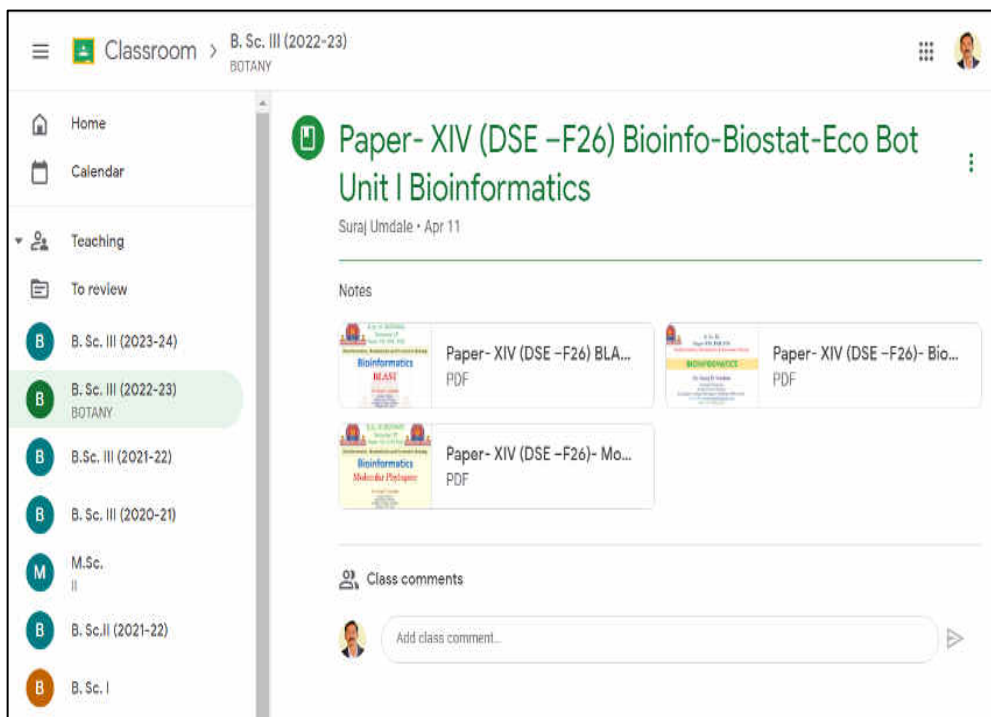

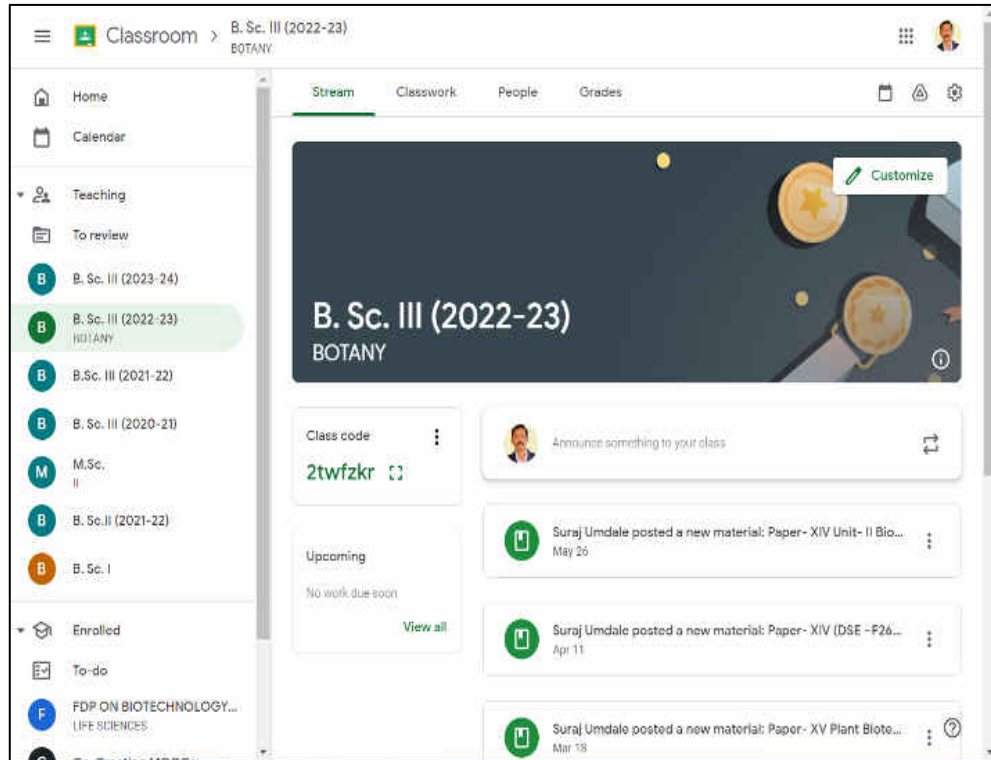

Norman Ernest Borlaug
Father of Green Revolution in world

Dr. M. S. Swaminathan
Father of Green Revolution in India

5

- The crop improvement means combining desirable characteristics in one plant and then multiplying it.
- A plant breeder is to select plants with desired characters, cross them and then identify the offspring that combine the attributes of both parents.
- Further, he multiplies the progeny to supply to farmers, growers or growers.
- The modern age of plant breeding began in the early part of the twentieth century, after Mendel's work was rediscovered.
- Today plant breeding is a specialized technology based on genetics.
- It is now clearly understood that within a given environment, crop improvement has to be achieved through superior heredity.
